

EMV Chip Cards help protect against fraud!

Beginning in January 2018, we will start rolling out new FedOne FCU Debit Card with new EMV Chip card technology. Once you receive your new card, be sure to activate it. If you already have a debit card, your card number and PIN will remain the same. If you have an ATM card, you will receive a new debit card with a new number and PIN.

Added Security

This tiny chip protects your card information in a big way. Security is a top priority at FedOne Federal Credit Union, and that's why we are moving to chip card technology to help protect our cardholders' information. When you use your card at a chip-enabled terminal, the embedded chip protects your information by creating a unique code for each transaction.

Wider Acceptance

Merchants across the U.S. are beginning to accept chip card transactions and this will continue to grow within the coming years. Your card will have both the EMV Chip AND a magnetic strip, so you can use it at terminals that have not been updated to accept chip based cards.

If you have questions or need additional information, give us a call at **(949) 360-3203** or **(213) 894-3808**.

Sincerely,

A handwritten signature in black ink that reads "Catherine Randazzo".
